PC 641 MSc-IT Project

Master of Science (Information Technology) at DA-IICT is an intensive program, offered to students who wish to pursue their professional career in the field of Information Technology [1]. The course structure of Msc (IT) at DA-IICT consists of four Semesters. The basic concepts and fundamentals of different programming languages are taught to the students during the first three semesters of the program. In the last semester, the students are expected to carry out their MSc-IT Project in some IT industry to get professional experience.

The duration of the MSc-IT project is a minimum of 16 weeks. The main aim of the project is to make students apply all the knowledge they gained during the first three semesters. The students must secure their placements during the placement fair that takes place after the 2nd Semester. Usually, the recruiting company provides the students with the opportunity of carrying out the MSc-IT project but failing that a student is left with no other option but to search for the industry by himself where he can carry out the project. The search for companies that provide with opportunities to carry out MSc-IT project must start by 15th September, failing which, students can end up in big trouble later on. There are a few industries that provide students of DA-IICT with an opportunity of carrying out their MSc-IT Project. Name of the companies and the latest dates of applying for the project are listed below:
